DETAILED ACTION

1. Claims 1-4, 6-16, 30-31, 36-44, 49-59, 65-76, 81-115, 121-134 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goldberg (#4,672,553) in view of East(#5,963,453). Goldberg teaches the apparatus and method of having an order assembling apparatus to fill an order wherein a label is machine readable with a sorting conveyor to order assembly locations to the order codes. Goldberg teaches that any package may be delivered to any order assembly location. The location depends on recognition of what that item is as represented by its characterization. This apparatus has the capability of production shipping invoices. This whole system can accommodate a wide range of package shapes, proportions and weights (col 8 lines 63+). Goldberg teaches the concept of order registering the items and has order selecting means for selecting respective orders to compare each registered item with a stored item characterization to allocate items to selected orders. This is controlling plural selective delivery means (claim 1). Goldberg discloses that a package has the same characterization as the item or items (col 1 lines 65+) inferring that the package may have a plurality of items. Goldberg does not specifically disclose the items and transport means as claimed. East teaches the concept of counting pills 52 that are going to be filled in prescription bottles/discs. East also teaches the concept of using a control computer 21 which controls the dispensing of system and that controls a plurality of carriers. The pill bottles/discs are placed on mechanical equivalent conveyors to transport the bottles and loading station reads a bar code on each prescription . It is well known in the art to use carriers to transport bottles. Regarding radio tags, radio

tags are well known in the art as they are marketed by Texas Instruments, Inc. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide Goldberg with transporting and counting means as taught by East to provide for a more synchronized and expedient operation. Regarding the placement of literature, Goldberg discloses that items may be packaged and the actual item to be packaged is a matter of design choice tailored to the user's preference. Regarding the two different sized bottles, as discussed supra, Goldberg discloses that the system accommodates different sized packages, etc.

- 2. Claims 5, 17-29, 32-35, 45-48, 60-64, 77-80, 116-120 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eugene Kim whose telephone number is (703)308-1886. The examiner can normally be reached on Tuesday-Friday 7:30 a.m 6:00 p.m.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)308-1148.
